

Science Week

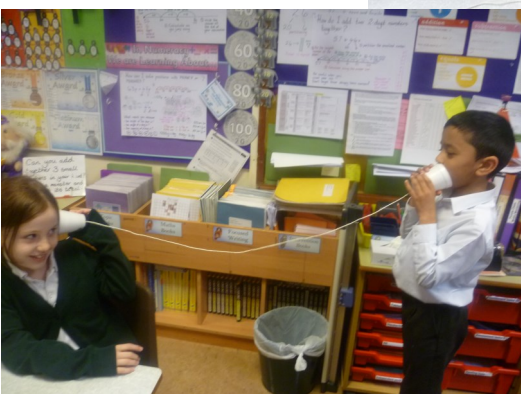

Year 2 Green Class

We used balloons and drums to help us listen to and feel vibrations. The vibrations tickled our lips and our ears.

We put some string on a metal coat hanger and hung the loops over our ears. When we dragged the coat hanger across different surfaces we could hear the vibrations.

We found out about the Scientist and Inventor Alexander Graham Bell. We made telephones using polystyrene cups and string. We held the string tight and listened to our partners voice and felt the vibrations.
