

Rockets, Aliens and Astronauts

Summer 1 in Gold Class.

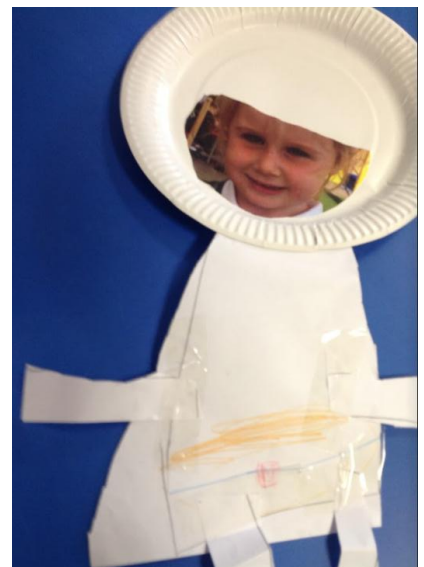

We have carried on our topic on the Solar system. We have read fact file all about famous astronauts and

learnt about life on the international space centre. We even learnt how they sleep in zero gravity!

Astronauts carry out all sorts of Science investigations while they are in space, so we did our own investigations in class. We investigated glowing stars, inflating balloons and even made up our own space potions.

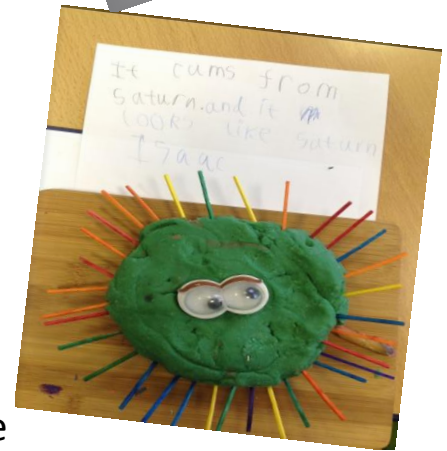

Next we looked at rockets; we made some rockets and even built some with 2D shapes.

We have learnt how to use the I pads to write all about the models we make!

We were even lucky enough to have an alien come to visit us at school. We wrote letters to invite the alien to tea and tried to make our own aliens.

The aliens set us a challenge to create a new rocket for them to blast off back home. We had to work in teams to

design a new rocket and then build it with junk modelling.

Finally we got to blast our rockets off in the playground - they went really high!

We have really enjoyed the space topic!

Well done Gold class, you have worked so hard! Keep it up.
