

College Lake

Our visit to 'College Lake' on 10th October was a fantastic day out. We found out all about 'Autumn' and had amazing opportunities to develop our Science knowledge. We explored different habitats.

Pond-dipping was by far our favourite activity of the day. We were able to use nets to help us find wildlife in the **wetland habitat**. We used equipment to remove the creatures into magnifying pots, in order to observe them more carefully. Then we used charts and guides to identify them.

We explored the **woodland habitat** to find signs of seasonal change. We found evidence that creatures lived there. We sorted our evidence in different ways. We improved our knowledge of the things creatures need to survive.

We had a fantastic day at **College Lake**. The staff at the Centre all said how well behaved and enthusiastic we were. We had a great day and learned lots of things which we can bring back to school to develop further.
